

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1.-41. (Cancelled)

42. (Currently Amended) A camera comprising:

a camera body;

a first memory, detachably installed inside the camera body, capable of storing image information corresponding to a plurality of photographic frames;

a second memory, fixedly installed inside the camera body, capable of storing image information corresponding to a plurality of photographic frames;

an image processor for processing image information;

a reproduction device, installed inside the camera body, to selectively receive and reproduce image information recorded on one of the first memory and the second memory; and

a changer for selectively changing between a first condition, in which image information on the first memory is outputted to the image processor ~~reproduction device~~, and a second condition, in which image information on the second memory is outputted to the image processor, the processed image data being outputted to the reproduction device.

43. (Cancelled)

44. (Previously Presented) A camera according to claim 42, which further comprises a finder for finding a camera subject.

45. (Cancelled)

46. (Previously Presented) A camera according to claim 42, which further comprises a button for advancing image information to be reproduced by the reproduction device among the plurality of photographic frames.

47. (Currently Amended) A camera capable of supporting a first memory and a second memory, the camera comprising:

a camera body;

a first connection electrically connectable to a first digital recording medium, detachably mounted inside the camera body, capable of storing image information corresponding to a plurality of photographic frames;

a second connection electrically connectable to a second digital recording medium, fixedly mounted inside the camera body, capable of storing image information corresponding to a plurality of photographic frames;

a reproduction device, installed in the camera body, to selectively reproduce image ~~data information~~ stored on one of the first digital recording medium and the second digital recording medium;

an image processor; and

a changer to selectively change between a first condition, in which the image processor, reproduction device, and the first connection are placed in communication, and a second condition, in which the image processor, reproduction device, and the second connection are placed in communication.

48. (Previously Presented) A camera according to claim 47, further comprising a finder for finding a camera subject.

49. (Previously Presented) A camera according to claim 47, further comprising a button for advancing image information to be reproduced by the reproduction device among the plurality of photographic frames.

50. (Currently Amended) A camera comprising:

a camera body;

a first memory, detachably mountable inside the camera body and capable of storing image information corresponding to at least two photographic frames;

a second memory, fixedly mounted inside the camera body and capable of storing image information;

a reproduction device to selectively receive and reproduce image information recorded on one of the first memory and the second memory;

an internal memory for temporarily storing image information;

an image processor coupled to the internal memory for processing image information temporarily stored therein; and

a changer for selectively changing between a first condition, in which image information on the first memory is outputted to the reproduction device, via the internal memory so that the image information recorded on the first memory is reproduced as an image by the reproduction device, and a second condition, in which image information on the second memory is outputted to the reproduction device via the internal memory so that the image information recorded on the second memory is reproduced as an image by the reproduction device.

51. (Cancelled)

52. (Previously Presented) A camera according to claim 50, further comprising a finder for finding a camera subject.

53. (Cancelled)

54. (Currently Amended) A camera capable of supporting a first memory and a second memory, the camera comprising:

a camera body;

a first connection electrically connectable to a first recording medium, detachably mountable inside the camera body and capable of storing image information corresponding to a plurality of photographic frames;

a second connection electrically connectable to a second recording medium,  
fixedly mounted inside the camera body and capable of storing image information;  
a reproduction device to selectively reproduce image information stored on one of  
the first recording medium and the second recording medium;  
an internal memory for temporarily storing image information;  
an image processor coupled to the internal memory for processing image  
information temporarily stored therein; and  
a changer to selectively change between a first condition, in which the  
reproduction device, the image processor, and the first connection are placed in  
communication via the internal memory so that the image information recorded on the first  
recording medium is reproduced as an image by the reproduction device, and a second  
condition, in which the reproduction device, the image processor, and the second  
connection are placed in communication via the internal memory so that the image  
information recorded on the second recording medium is reproduced as an image by the  
reproduction device.

55. (Previously Presented) A camera according to claim 54, further comprising  
a finder for finding a camera subject.
